

Environmental Taxes, 1981-84

By Rashida Belal*

Through the calendar year ended December 1984, \$978 million in tax liability was reported by companies for environmental excise taxes. Of this amount \$642 million was for petrochemicals; \$172.2 million for inorganic chemicals, \$150.3 million for petroleum and petroleum products, and \$10.7 million for hazardous wastes.

In 1980, Congress created a major Federal program to clean the worst abandoned hazardous waste sites. The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) provided for a 5-year clean-up program. Funds were to be accumulated through the Hazardous Substance Response Trust Fund portion of CERCLA, more commonly referred to as Superfund [1]. The tax rates of the "front-end tax" were formulated so that they produce \$1.6 billion over 5 years and the tax liability incurred for petroleum and chemicals would reflect the respective percentage in which they were found in hazardous waste sites (based on data available in 1980) [2].

REQUIREMENTS FOR REPORTING TAXES

Requirements for filing and reporting a tax on petroleum apply to the following:

1. Operators of U.S. refineries receiving crude oil;
2. Importers of petroleum products for consumption, use, or warehousing; and
3. Users or exporters of crude oil on which the environmental tax has been paid.

The requirements for filing and reporting the tax on chemicals apply to any importer, manufacturer, or producer that sells or uses any of the 42 taxable chemicals listed in Table 1. Since the tax is imposed only once on a product, once it has been paid it cannot be imposed again on another business that would otherwise be liable. There are some exceptions to what is taxed, with the following being nontaxable:

1. Ammonia, if used directly as a fertilizer;
2. Methane or butane used as a fuel (however, the business using the chemical for a taxable purpose is liable);
3. Nitric acid, sulfuric acid, ammonia, or methane used in the production of ammonia for fertilizer;
4. Sulfuric acid produced solely as a by-product of, and on the same site as, air pollution control equipment; and
5. Any substance derived from coal.

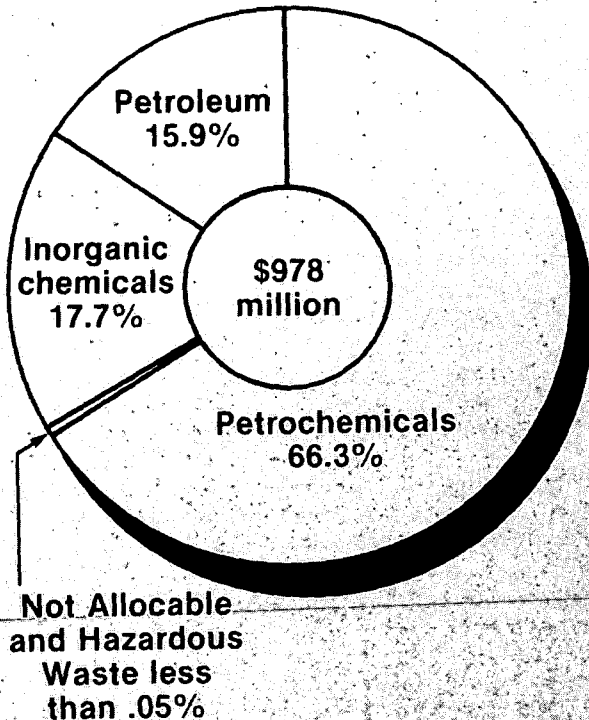

CERCLA, which contains the provisions for reporting liability against hazardous waste, also established the Post-closure Liability Trust Fund which includes the Hazardous Waste Tax. The Hazardous Waste Tax, "a waste-end tax," is imposed on the receipt of hazardous waste at a "qualified" hazardous waste disposal facility. The tax applies to any hazardous waste that will remain after the facility is closed. The tax took effect October 1, 1983 and will be in effect until the unobligated balance of the Post-closure Liability Trust Fund exceeds \$200 million.

As shown in Figure A, the largest share of taxes has been from petrochemicals. Tax liability reported for petrochemicals accounted for 66 percent of the total reported through December 1984. Inorganic chemicals represented 17 percent of the tax liability and petroleum and petroleum products accounted for 16 percent of tax liability.

It is interesting that, while the tax on petrochemicals accounted for 66 percent of total tax, it continued to be reported by the fewest number of businesses. As a result, these businesses had the highest average tax liability, more than \$2.5 million per company for petrochemicals. Inorganic chemicals, reported by 41 percent of the companies, ac-

*Foreign Special Projects Section. Prepared under the direction of Mike Alexander, Chief.

Figure A
Sources of Environmental Taxes,
Quarters Ending June 30, 1981,
through December 31, 1984

counted for an average tax of \$400,000 per company. In comparison, while petroleum and petroleum products were reported by 42 percent of the companies, the average tax was \$347,000 per company.

Number of Businesses and Amount of
Environmental Taxes for Quarters Ending
June 30, 1981 through December 31, 1984
[Money amounts are in thousands of dollars]

Type of tax	Number of businesses	Total tax	Average tax
	(1)	(2)	(3)
Total Environmental Tax	1,015	978,108 ¹	964
"Superfund"			
Petroleum	433	150,335	347
Petrochemicals	252	641,842	2,547
Inorganics	430	172,187	400
Post-closure Liability Trust Fund	122	10,703	88

¹Includes taxes not allocable to a specific category. For this reason and also because of rounding, detail will not add to total.

The number of companies reporting liability for hazardous wastes under the Post-closure Liability Trust Fund increased by 62 percent over 1983, from the 74 companies reported as of December 1983 to 122 companies as of December 1984. The average tax for that same period rose from \$23,000 to more than \$87,700.

Since the quarter ended June 1981, 1,015 companies reported liability for environmental taxes at least once and the average reported liability was \$963,000 per company. This picture warrants a closer inspection, however. The 40 companies reporting \$5 million or more in tax liability accounted for 78 percent of the tax. The 23 companies reporting \$10.5 million or more in tax liability averaged \$18.5 million in tax and were responsible for 65 percent of the total. But the lion's share of the tax was in fact reported by fewer than 1 percent of the reporting companies. The companies reporting \$20 million or more in tax liability accounted for more than 50 percent of the tax. These twelve top companies averaged more than \$40 million in environmental taxes.

The quarter ended June 1983 showed an increase for petroleum, petrochemicals and inorganic chemicals for the first time since the quarter ended June 1982. Total tax liability for the quarter ended December 1983 was \$68.6

"Superfund" Taxes by Category for Quarters
Ending June 30, 1981, through December 31, 1984

[Millions of dollars]

Quarter ending	Total	Petrochemicals	Inorganic chemicals	Petroleum
Total ¹	(1)	(2)	(3)	(4)

Dec. 1984	69.3	42.2	14.6	10.4

¹Includes taxes not allocable to a specific category. For this reason and also because of rounding, detail will not add to total.

million, up by almost \$4 million over the September 1983 figure. March 1984 figures showed an increase of \$17.3 million over March 1983 and almost \$8.5 million in tax liability over the quarter ended December 1983. Tax liability dipped slightly for the quarter ended June 1984 to \$75.6 million, a decrease of about \$1.4 million from the previous quarter. This was especially noteworthy since the second quarter has traditionally shown a rise because of the increase in chemical shipments to the agricultural and construction markets. The slide continued into the quarter ended September 1984, when tax liability dropped to \$66.0 million. The liability reported for the quarter ended December 1984 climbed back up to \$69.3 million; however, that amount was still more than \$7.7 million off the mark set in March 1984 [3] [4] [5].

PETROCHEMICALS

Two hundred and fifty-two companies, only 25 percent, reported tax for petrochemicals and those companies averaged \$2.5 million in petrochemical tax. The 47 companies that reported more than \$257 million in tax liability for ethylene averaged \$5.5 million. The next largest amount of liability, \$116 million, was reported for propylene. A total of 58 companies averaged \$2.0 million in liability for propylene. Naphthalene was reported by only 9 companies and the average tax reported was about \$135,000. Toluene, reported by the largest number of companies, 104, averaged \$412,000.

INORGANIC CHEMICALS

Tax on inorganic chemicals was reported by 430 companies or 42 percent of the companies reporting environmental taxes. Those companies reported an average of \$400,000 in tax for inorganic chemicals. Sulfuric acid was the single most reported chemical, reported by 26 percent of the companies. The average tax on sulfuric acid was \$82,000.

SUMMARY

Through the calendar year ended December 1984, \$978 million in liability was reported for environmental excise taxes. The largest share of taxes reported was from petrochemicals. This was by design, since rates were formulated so that liability per class of substance would reflect the percentage in which these substances were found in hazardous waste sites.

The Superfund portion of CERCLA expired September 30, 1985. The tax liability reported for hazardous waste reached \$11.5 million dol-

lars in Calendar Year 1984. This portion of CERCLA will remain in effect until the unobligated balance of the Post-closure Liability Trust Fund exceeds \$200 million or until it is repealed.

Since the quarter ended June 1981, 1,015 companies reported liability for environmental taxes at least once and the average reported liability was \$938,000 per company. However, the lion's share of the liability is, in fact, reported by fewer than 1 percent of the reporting companies. These top 12 companies accounted for more than 50 percent of the tax, an average of \$40 million in environmental tax per company.

DATA SOURCES AND LIMITATIONS

The Quarterly Excise Tax Return, Form 720, is the form on which environmental taxes are reported. Form 6627, Environmental Taxes, is the supporting schedule on which the tax liability for petroleum, chemicals and hazardous waste is computed. The tax as imposed by Congress is levied at different rates ranging from \$.0079 per barrel of crude oil or petroleum to as much as \$4.87 per ton of certain chemicals. The average tax levied is \$3.24 per medium.

Returns are due to be filed one month after the end of the quarter in which the business is liable for environmental taxes. These returns are the source of data for this study. Data in this article reflect information reported on returns filed for the tax quarters ending June 30, 1981, through December 31, 1984.

Any adjustments, credits, or refunds to environmental taxes on either the Form 720 or Form 843, Claim, are not reflected in the data. A taxpayer can take an adjustment or credit if a taxed chemical is later used to manufacture or produce any other substance subject to the tax. If a tax is paid on a chemical subsequently used to produce fertilizer, a credit or adjustment can also be claimed.

The Internal Revenue Service also releases environmental tax statistics in a report on excise taxes issued quarterly [6]. These figures, taken from the Form 720, show the total liability, after adjustment, on returns recorded on the computerized Business Master File as part of routine tax administration processing. There is, however, no distribution of tax by type of chemical. Returns are due one month after the end of the calendar quarter and are reflected in the statistics for the quarter in which they are filed (and processed). Also included are returns filed late because of routine filing extensions and other reasons. Therefore, that report covers whatever tax was recorded during a quarter, regard-

less of when it was incurred. Consequently, the two series of data are not directly comparable.

Since no statistical sampling was involved, the data are not subject to sampling error, but may be subject to nonsampling error. Although efforts were made to secure missing returns, some returns from previous quarters were substituted because of time and resource constraints. In addition, the returns were passed through a series of validity checks to verify the accuracy and completeness of the returns. For those returns supplying a total chemical tax with no distribution by category, the amount was included in the statistics under "unallocable chemicals."
